

### Formulary Tool Kit

# Jumpstart Your Insourcing Initiative at a Significantly Reduced Cost

As the global leader in IV automation, Omnicell surrounds our state-of-the-art technology with novel data services, applications support, and the expertise hospitals and health systems need to best leverage automation technology.

### Low Cost Access to cGMP Stability Studies

Through a partnership with Analytical Research Labs (ARL), Omnicell's Formulary Tool Kit (FTK) helps you quickly adopt, fully leverage, and maximize return on investment in IV automation by providing immediately available, low cost access to cGMP stability studies and density data for most common CSPs.

FTK also provides hospitals and health systems access to ARL for ongoing sterility testing at prenegotiated discounted rates and guaranteed turnaround time.

Extending beyond-use dates has never been easier, faster, or more cost effective.

### Analytical Research Laboratories (ARL)

Analytical Research Laboratories (ARL) is a contract research laboratory serving the pharmaceutical and compounding pharmacy industries since 1994, providing a wide range of services including assay for pharmaceutical ingredients, stability studies, and full compendial testing. ARL is registered with the FDA, DEA, and accredited to the ISO 17025:2005 standard that outlines general requirements for the competence of testing laboratories by the American Association of Laboratory Accreditation (AALA).

## Accelerate Insourcing Initiatives and Drive Returns

### High Quality cGMP Studies for 503A or 503B Compounding

Studies meet the high standards of cGMP stability indicating methods required by the FDA. They may be used for extended dating programs in either 503A or 503B facilities.

- All study method development and validation meets cGMP standards
- All density data required for gravimetric controls has Certificate of Analysis (CoA) from ARL or drug manufacturer when available

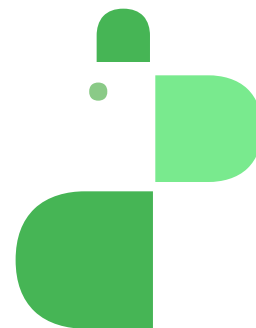

### Immediately Available Extended Dating Studies and Drug Density Data

Formulary Tool Kit takes the guesswork and time out of the extended dating process by providing ready-to-use stability studies and the opportunity to accelerate your IV automation strategy and ROI.

- Library of ready-to-use stability studies for common drugs compounded with IV robotic technology
- Robust database of drug density information

### Low Cost and Ongoing Support

- cGMP stability studies offered at a fraction of market rates
- Density data is provided free of charge
- Prenegotiated discounted rates and guaranteed turnaround time for ongoing sterility testing through ARL for USP <71> compliance
